

Reliability-centred Maintenance

A One Day Overview for Senior Managers and Supervisory Staff

COURSE PROGRAMME

- The twelve maintenance maxims
- Paradigm shifts in traditional maintenance thinking
- Formulating an asset management strategy
- The RCM asset management strategy formulation process
- The SAE RCM Standard
- RCM, past, present and future
- Open Forum

A full set of notes will be provided for each delegate.

WHO SHOULD ATTEND?

- Senior Managers with overall responsibility for physical asset performance
- Finance Managers
- Maintenance and Production Managers and Supervisors
- Reliability Engineering and ILS professionals

The need for maintenance has been with us ever since the inventions of the first machines. With increased mechanisation and automation, we have become increasingly dependent on machines in every aspect of our working and daily lives.

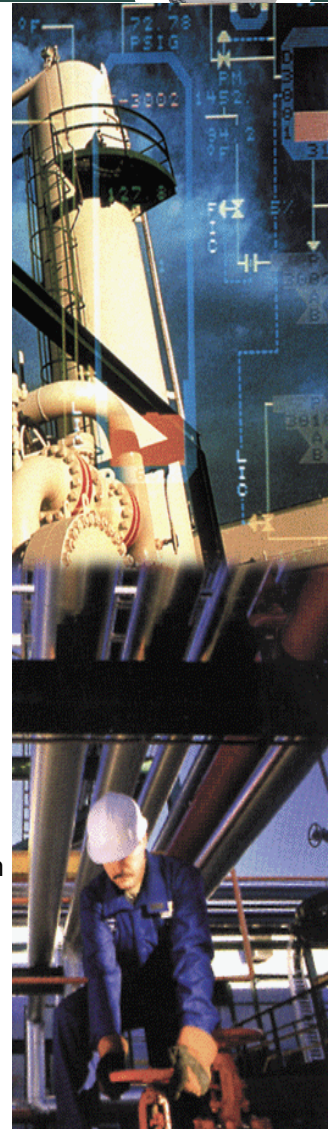

Unfortunately, our fundamental understanding of what maintenance is and how it should be managed has not developed as quickly as our enthusiasm for increased equipment complexity or our growing dependency. Through our lack of understanding of maintenance fundamentals, we frequently waste excessive financial resources, suffer poor product quality, environmental damage and sometimes loss of life during asset operation.

Reliability-centred Maintenance is now globally recognised as the *only* process which, through its focus on maintenance fundamentals, is able to determine systematically and scientifically the maintenance requirements of any physical asset in its operating context.

This one day seminar delivered by Dr Alun Roberts, one of Australasia's leading experts in the application of RCM, is designed to challenge your existing knowledge of maintenance and to introduce you to the RCM process (RCM II) and its implementation.

By attending, you will discover the way to make best use of physical assets, and to avoid potential damage to profits and, ultimately, personal reputation. The morning session will address twelve areas of change – each one of them sufficiently far reaching to merit the full attention of most organisations. In the afternoon, the RCM process, which deals with all twelve areas of change simultaneously, will be discussed.

This course will change the way your organisation views maintenance.
